P. O. Box 3623
Portland 8, Oregon

347
Stilpnotia salicis

5220 LGL-3-14

TO : R. L. Furniss

DATE: August 6, 1962 1503

FROM : P. W. Orr

SUBJECT: Detection

On the evening of July 30 a mass flight of satin moth adults occurred in Redmond, Oregon. On the morning of July 31 the sidewalks in front of several stores on U.S. Highway 97 were white with dead and dying moths. Egg masses were plastered over windows, doors, and on parking meters.

I could find no evidence of feeding damage on any hardwoods nearby.

P. W. Orr

Val -

Natural history continued,

Recently I've noticed that the fall webworm nests are shaping up around town. Soon may be the time to send a few to our Yugo friend.

RLF.

Our previous collection yielding Menicia ampelus (in which Cameron is interested) was made in mid-September.
